

MIXIM ROOM

OVERVIEW

The Millibar mixing rooms have been designed to provide a bright, clean and well-ventilated area for mixing paints. White pre-coated steel and color-corrected, high efficiency lights allow proper colour matching.

Ideal ventilation

Removal of harmful fumes and vapors. Effective removal of contaminants and dust in the mix room air

White pre-coated galvanized steel

Better light diffusion minimizing reflections and glare. Weld-free construction prevents rusting and improves booth strength

Double wall insulated panel construction

Smooth fit and finish reduces risk of dust collection. Insulated design reduces noise inside the booth

Color correct, high efficiency light fixtures

Ideal illumination for proper colour matching. High efficiency neon tubes for high energy savings
